

DESIGN CAPABILITIES

Design Capabilities

Our system designs are based on proven technology and experience obtained from previous projects completed by our company. We do not integrate system components or concepts into our design/ build projects unless we have a proven history of satisfactory performance. We do not conduct system research and development at your expense. We spend Armenia as if it were our own.

Our designs have been applied to a very diverse range of installation applications including light and large commercial, industrial, hospital, laboratory, and educational buildings.

Power Engineering's team of engineers, designers, draftspersons and technicians are dedicated to ensuring your complete satisfaction with our services. We cannot afford even one dissatisfied client.

Product integrity and client satisfaction are deeply rooted in our years of expertise and proven system performance. We design our systems logically in response to your specific building requirements.
